

News from MathWorks:

On October 31st, WestGrid, part of Compute Canada, is hosting a free webinar entitled: [Data Analytics and Machine Learning with MATLAB](#)

Sumit Tandon, an electrical engineer and MATLAB expert at MathWorks, will present and demonstrate how MATLAB tackles complex data analysis problems. He will also describe how to use MATLAB on Compute Canada HPC resources.

This is a great opportunity for faculty, researchers, staff, and students to learn more about tools for machine learning, big data, and parallel computing with MATLAB.

Highlights:

- Access, process and visualize big and complex data
- Prototype, test and refine predictive models using machine learning methods
- Scale up using parallel, GPU and cluster computing
- Share results as reports and interactive Apps on various platforms

To register and learn more about the event, visit: [Data Analytics and Machine Learning with MATLAB](#)

Please forward this to anyone on campus or other colleagues in Canada who would be interested in the event.

If you have any questions please do not hesitate to contact me.

Thank you,

Joe Hurstak
